iCar Immobiliser

Overview of *iCar Immobiliser*

iCar Immobiliser is the most advanced vehicle security system available today. It can be fitted onto all types of vehicles, from the high end to the low end. Unlike some standard immobiliser, this system not only prevents theft but also prevents carjacking and towing.

Should a thief steals your car, the engine will die after the car has been driven away for about 1 or 2 minute. Optionally, the horn may sound to attract publics' attention. The thief or carjacker will have no choice but to abandon your vehicle.

The Made in USA secure touch key (iKey) provided has a unique serial number for every key. It cannot be duplicated, even by the manufacturer. When properly installed, it cannot be easily compromised.

Its built-in Memory remembers the arm status forever. It also uses very little current, therefore will not drain your car battery. It will provide you and your family peace of mind for many years to come. You should keep your Secure iKey separate from your car key.

Technical Specifications

Operating Voltage	: 7 – 18 Volts
Current Consumption	: 20 mA
Key Housing	: Stainless Steel
Touch Key Response	: 0.5 seconds
Processor Type	: RISC
Processor Speed	: 4Mhz
Memory Type	: Non-Volatile
Sensors	: Vibration and Motion
No of Keys	: 2
