

SA2 Alarm System

General Description

In today's uncertain world, security for homes and offices has become necessary.

SA2 is a cost effective alarm system that is ideal for small offices, condominiums and homes.

It will call your mobile phone whenever anybody enters your house or office.

When you listen to your phone, it can tell you which door or window was triggered, then you can decide to catch the burglar or press a button on your phone to activate the siren.

It can also be used to monitor what time your staff opens your shop in the morning.

Features

- 5 – 8 alarm zones
- No false alarms
- Notify you by hand phone if someone entering the office or house
- Allow to set 2 phone numbers to call
- Beeps on your mobile phone to tell you which door was triggered
- Easy to use and simple to install
- No Monthly charges for central monitoring services
- Siren can be controlled to switch on and off by hand phone
- Works with any type of sensor including magnetic door sensor, infrared motion detector and vibration sensor.

A Home Security Primer

In these modern times, crime rates has risen more than ever in known history and is showing no signs of improvement. That is why home security systems like Burglar Alarms, Door Access Systems and CCTV Cameras are becoming a necessity. When choosing an Alarm System, an average home owner may be confused over the many choices available. As a guide, you should choose a Alarm System that has the following attributes.

1. Hidden Alarm Controller / Keypad.

Some alarm systems openly display the Keypad and Controller in prominent view. This is not advisable because a professional burglar can easily disable an alarm system or siren at the controller. Get an Alarm System that has a small controller that can be hidden inside a cabinet or behind the TV to deter the professional burglars. Any burglar will panic when the siren has sounded and they can't find the alarm system controller.

2. Calls you on your mobile phone

Most modern Alarm Systems are capable of calling you on your mobile phone when triggered. This will let you know which door or window was opened and you can decide whether to sound the siren or not. This way, you can reduce false alarm sirens and avoid irritating the neighbors. Avoid some outdated systems that cannot call out or systems that can only call the Central Monitoring Stations.

3. Wired Systems

When choosing alarm systems, try to avoid wireless types. While wireless systems may look attractive from its low price, it may be prone to hacking by high tech burglars and organized syndicates who comes with their own wireless jamming devices. Stick with the wired systems for better protection.

Optional Accessories

Siren

Infrared Motion Detector

Door Sensors

SA2 Keypad

External Siren Box with Light
